

## Software Center - Odgoda automatskog restarta

U sljedećih nekoliko koraka objasniti ćemo kako suspendirati, tj. odgoditi automatski bezuvjetni restart računala nakon instalacije nadogradnji.

**PsSuspend** <https://technet.microsoft.com/en-us/sysinternals/bb897540.aspx> [1]

**Process Explorer** <https://technet.microsoft.com/en-us/sysinternals/bb896653.aspx> [2]

1. Pokrenuti CMD kao Administrator
2. taskkill /F /IM SCnotification.exe
3. pssuspend.exe CcmExec.exe
4. shutdown /a

**Objašnjenje opcija (switcheva) naredbe taskkill:**

/F - Force gašenje procesa

/IM - Image Name tj. naziv procesa

/a - Abort tj. prekid izvršenja restarta OS-a ili računala

Postupak se može odraditi i preko Process Explorera na isti način. Potrebno je pronaći navedene procese te preko desnog klika ubiti proces SCnotification.exe, a pauzirati (*suspend*) proces CcmExec.exe.
